

WINDOWS

Windows are one of the most overlooked parts of your home in our opinion. They are the biggest area of potential heat loss. There are many factors that play a roll in this for windows and at Hopper we are EXPERTS in understanding these factors and can help you understand them too. Let us help you make your home more efficient with new energy star windows.

Black Windows Without a Worry

Quaker's black Manchester windows offer a textured black wrap rather than paint like many other manufacturers. This allows for a more scratch resistant finish.

Maximum Natural Light

Quaker windows are custom made to order allowing you to make your windows how you want them. This homeowner wanted a wall of windows to let in as much natural light as she could. I think she nailed it.

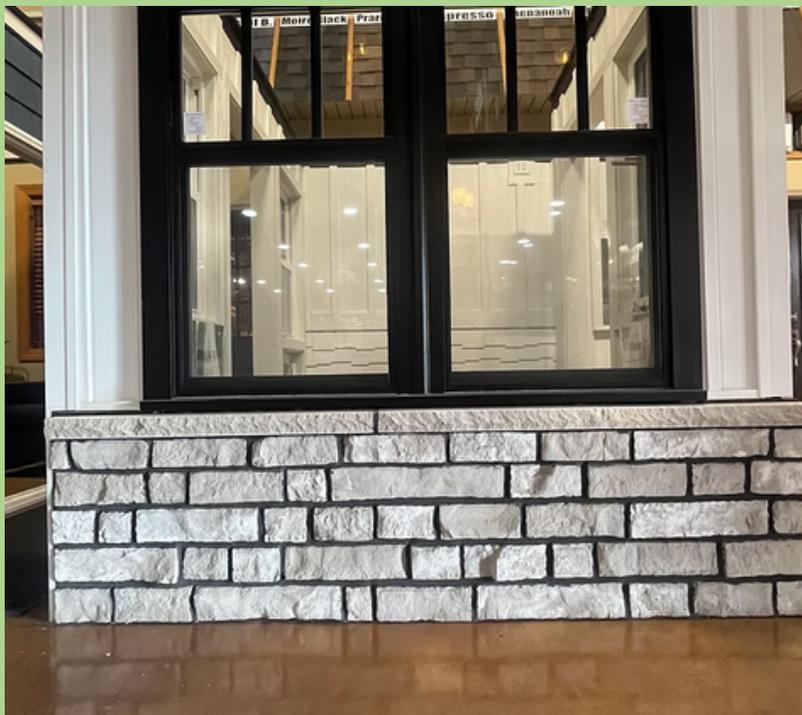

Endless Design

Provia's Endure line as well as their others offer you unique designs with your windows. Featured here is a picture window over two awning windows. This unit is factor muller meaning it come put together as one piece.

Energy Efficient to the MAX

Featured above is Provia's Endure line in a Casement. This casement window holds the strongest pressure rating and air infiltration you can get from an operable window. Also, this window has Provia's TLA-UV glass which is a triple pane glass with Low-e ultraviolet glass and argon fill. This set up give you a Northern Energy Star rating.

Designer Windows

We are able to give you more than just your standard window. Here we have an Atrium 450 new construction window. This window is tricked out with a 3 1/2" flat casing around a twin double hung that is in a cottage style and twin transoms.

Talk About an Opening

Atrium's 334 patio door is a 12' dual slide patio door. When fully opened you have nearly 6' of opening. This makes for a dream when that new couch or cabinets get delivered.
